

Software Development

TB Technologies provides custom software development and system integration services that create comprehensive solutions and a robust information efficiency flow. Our experts provide tech advisory services, custom development, system analyses, and system assessments to help you keep your application landscape current, reliable, and ready for growth.

In today's rapidly evolving digital landscape, having a reliable and sophisticated technical ecosystem is no longer a luxury but a necessity for businesses to thrive and grow. We specialize in system modernization and digital transformation services that create comprehensive solutions and an information efficiency flow. Our services include:

Custom Development

Our custom software solutions are designed to solve your present challenges and future-proof your business, ensuring that you are ready to adapt and grow in the face of future developments.

System Integration

Different systems in your organization must interact seamlessly for optimal performance, creating an efficient flow of information across your business operations. Our experts work closely with you to understand your existing systems and processes, identify gaps or inefficiencies, and develop integrated solutions that streamline your operations and enhance productivity.

Cloud Development

Crafting software applications that capitalize on the flexibility and scalability of cloud infrastructure, our cloud-based solutions are designed to optimize business operations, reduce IT costs, and enhance scalability, allowing you to manage and grow your business seamlessly in a digital environment.

Data Migration

Data migration is a crucial aspect of digital transformation. Our experienced team can facilitate the seamless transfer of your data from one system to another, ensuring minimal downtime and disruption. We carry out careful planning and execution to ensure your data's integrity and security during migration.

System Maintenance

We offer regular system maintenance services to maintain the optimal performance of your software and hardware components. This includes updating systems to the latest versions, troubleshooting issues, and ensuring that your systems run smoothly and efficiently. We proactively identify potential issues before they become problems, ensuring uninterrupted business operations.

Technical Support

Our dedicated technical support team is always ready to assist you, providing fast and efficient support to resolve any issues you might encounter with your software and hardware components. From minor troubleshooting to complex problem-solving, our support team is committed to ensuring your systems run smoothly.

System Testing

Our rigorous system testing ensures software and hardware components function as intended. We employ various testing methods, including functional testing, performance testing, and security testing, to ensure that systems are robust, secure, and reliable.

Software Development

TB Technologies is knowledgeable across various frameworks and languages. We aim to develop the right solution for current and future clients and partners to fit each specific scenario. Our team is here to offer support and provide solutions in any capacity – whether a complete, customized integration or a simple development project. Our experts can assist across any engagement.

Relevant Experience

CRS – Oneida Research Services, Utica, NY

TB Technologies provided custom software design and development for our client's internal operational application. We developed and implemented strategy and guidance for an application roadmap and followed best practices for code development and deployment, leveraging Azure DevOps for repository and feature deployment.

311 Mobile App – City of Rome, NY

The TB Technologies team developed a mobile app for residents and visitors of the City of Rome, NY, to submit city incidents and/or local concerns that affect the town's productivity to the local government.

The app served as a communication tool for locals to communicate with their local government and integrated with the city's current system to address local work orders.

Maui Wildfire Right of Entry (ROE) – Maui County and Emergency Management Agency, Maui, Hawai'i

TB Technologies digitized the Right of Entry form in response to the 2023 Maui fires to facilitate inter-agency collaboration and consolidate application artifacts into one location. Our team introduced data controls to mitigate errors and duplicate entries. The ROE was used by our affiliate company Tidal Basin, the client, and other subcontractors to support the ROE process cohesively.
