Mitigation

Tidal Basin is a comprehensive, all-hazards emergency management company focused on providing preparedness, response, recovery and mitigation consulting services to our clients. We believe that when a disaster strikes, communities need to facilitate their own recovery and enhance their future resiliency. Our expert staff provides public and private sector clients with solutions that enhance their preparedness, resilience, and ability to respond to and recover from incidents of any scope.

Tidal Basin has supported strategic planning efforts and developed critical gap analysis and after-action reports to implement effective emergency management programs for state, local, and federal governments, as well as for the private sector. Utilizing risk-based and whole-community principles, our trained staff supports clients in the development of comprehensive plans, training, and exercises to optimize preparedness.

Tidal Basin's Preparedness Services

Training

When a disaster strikes, diverse stakeholders are required to participate in the emergency response and recovery effort. Customized training solutions are fundamental to ensure operational success at the time of a disaster by incorporating prior learning with interactive training modules. Tidal Basin helps ensure the information can be recalled by participants several months or years later. Our training programs include micro-learning modules to support self-driven relearning opportunities.

Assessments

Tidal Basin provides comprehensive assessments which benchmark our clients' readiness to national and state-based guidelines and regulations. Using best practices and lessons learned from our years of experience to determine actionable next steps, these assessments can focus on a specific hazard, a specific capability, or be used to support Emergency Management Accreditation Program (EMAP) certification.

An After-Action Report (AAR) can also be conducted to document a response to a specific incident and outline recommendations for the future.

Planning

Our team has developed comprehensive plans for local and state governments, educational institutions, healthcare facilities and private sector clients, including comprehensive plans for continuity and emergency operations, long-term recovery, and hazard mitigation.

We can help you develop programs and plans to assess hazards, risks, and vulnerabilities and identify the resources needed to respond and recover from any event.

Exercises

Homeland Security Exercise and Evaluation Program (HSEEP) compliant exercises are vital to preparedness. Our HSEEP-certified and Master Exercise Practitioners develop realistic exercises that provide effective learning opportunities, and after-action reports to document strengths and challenges and provide recommendations for future improvement.

Our satisfied clients include:

- State of Michigan
- State of Alaska
- State of New York
- Commonwealth of Virginia
- New Jersey Office of Homeland Security and Preparedness
- City of Dallas
- Los Angeles Department of Water and Power
